📍 City:
  Seville

📅 Date of birth :
  30/03/2000

About me:

I am currently a student in the final year of computer engineering the University of Seville (Spain). My studies have allowed me to develop expertise in the field of computer technologies and to acquire a solid foundation in its various approaches. Passionate about ICT, my goal is to continuously improve my skills every day by putting in all the necessary efforts and sacrifices. I am particularly interested in studying artificial intelligence and its applications, the development of integrated systems, the use/integration of fine-tuned generative AI, fine-tuning of LLMs, and machine learning.

In parallel, I gained invaluable experience during a five-month internship as a software engineer at Sopra Steria (a European leader in digital services), where I was closely involved in designing and implementing effective technological solutions for international companies. This internship provided me with the opportunity to apply my academic knowledge in a professional environment, acquire new skills, and become familiar with the world of work.

Regarding my final year project, it involves developing a mobile application for voice chat integrating a chatbot. The main objective is to allow users to interact naturally with the chatbot, using voice to obtain information about dishes or place orders. This approach aims to make the user experience as close as possible to a conversation between two people.

Looking ahead, I am looking to pursue further studies in a Master's degree program to consolidate my knowledge and prepare myself to be actively involved in the exciting and complex challenges of artificial intelligence, particularly, and computer technologies in general.

Academic Education:

Spanish School of Rabat   2003-2018
Scientific Emphasis - High School Diploma

University of Seville   2018 – present
Bachelor's degree in computer engineering
Specialization in Computing

Technologies:

Programming languages:
C, Python, Java, JavaScript, SQL, HTML, GIT, CSS, Haskell, Kotlin, R, DART.

Frameworks and Technologies:
SpringBoot, Angular, Flutter, Microsoft PowerBI, JQuery, Docker, Flask,

Machine Learning:
TensorFlow, Deep Learning, LangChain, Neural Networks.

Internship experience:

Sopra Steria   September 2023 - Present
Internship contract

Languages:

English (B2 IELTS 2024)
Spanish (Native)
French (Native)
Arabic (Native)
